Homework 02

Review about facts used in proof techniques

Proof exercises for clarification (if time allows)

- To finish by 4h25

* Exercise 1 (score = 20)

Use truth tables to determine whether the argument form below is valid

(1)

- premises: $p \rightarrow q, q$
- conclusion: p

(2)

- premises: $p \rightarrow q, \sim p$
- conclusion: $\sim q$

(3)

- premises: $p \rightarrow q, p$
- conclusion: q

(4)

- premises: $p \rightarrow q, \sim q$
- conclusion: $\sim p$

Solution 1.1

(1)

- premises: $p \rightarrow q$, q
- conclusion: p
- **Not valid**

p	q	$p \rightarrow q$	q	p
T	T	T	T	T
T	F	F	F	T
F	T	T	T	F
F	F	T	F	F

Solution 1.2

(2)

- premises: $p \rightarrow q$, $\sim p$
- conclusion: $\sim q$
- **Not valid**

p	q	$p \rightarrow q$	$\sim p$	$\sim q$
T	T	T	F	F
T	F	F	F	T
F	T	T	T	F
F	F	T	T	T

Solution 1.3

(3)

- premises: $p \rightarrow q$, p
- conclusion: q
- **Valid**

p	q	$p \rightarrow q$	p	q
T	T	T	T	T
T	F	F	T	F
F	T	T	F	T
F	F	T	F	F

Solution 1.4

(4)

- premises: $p \rightarrow q$, $\sim q$
- conclusion: $\sim p$
- **Valid**

p	q	$p \rightarrow q$	$\sim q$	$\sim p$
T	T	T	F	F
T	F	F	T	F
F	T	T	F	T
F	F	T	T	T

* Exercise 2 (score = 60)

Use truth tables to determine whether the argument form below is valid

(1)

- Premises: $p \rightarrow q, \sim p \rightarrow \sim q$
- Conclusion: $p \vee q$

(2)

- Premises: $p \vee q, p \rightarrow \sim q, \sim r \rightarrow \sim p$
- Conclusion: r

(3)

- Premises: $p, \sim q \rightarrow \sim p, \sim q \vee r$
- Conclusion: r

(4)

- Premises: $p \vee q \rightarrow \sim r, p \vee \sim q, \sim q \rightarrow p$
- Conclusion: $\sim r$

(5)

- Premises: $p \rightarrow r, q \rightarrow r$
- Conclusion: $(p \vee q) \rightarrow r$

(6)

- Premises: $p \rightarrow (q \vee r), \sim q \vee \sim r$
- Conclusion: $\sim p \vee \sim r$

Solution 2.1

(1)

- Premises: $p \rightarrow q$, $\sim p \rightarrow \sim q$
- Conclusion: $p \vee q$
- **Not valid**

p	q	$\sim p$	$\sim q$	$p \rightarrow q$	$\sim p \rightarrow \sim q$	$p \vee q$
T	T	F	F	T	T	T
T	F	F	T	F	T	T
F	T	T	F	T	F	T
F	F	T	T	T	T	F

Solution 2.2

(2)

- Premises: $p \vee q$, $p \rightarrow \sim q$, $\sim r \rightarrow \sim p$
- Conclusion: r
- **Not valid**

p	q	r	$\sim p$	$\sim q$	$\sim r$	$p \vee q$	$p \rightarrow \sim q$	$\sim r \rightarrow \sim p$	r
T	T	T	F	F	F	T	F	T	T
T	T	F	F	F	T	T	F	F	F
T	F	T	F	T	F	T	T	T	T
T	F	F	F	T	T	T	T	F	F
F	T	T	T	F	F	T	T	T	T
F	T	F	T	F	T	T	T	T	F
F	F	T	T	T	F	F	T	T	T
F	F	F	T	T	T	F	T	T	F

Solution 2.3

(3)

- Premises: $p, \sim q \rightarrow \sim p, \sim q \vee r$
- Conclusion: r
- **Valid**

p	q	r	$\sim q$	$\sim p$	$\sim q \rightarrow \sim p$	$\sim q \vee r$	p	r
T	T	T	F	F	T	T	T	T
T	T	F	F	F	T	F	T	F
T	F	T	T	F	F	T	T	T
T	F	F	T	F	F	T	T	F
F	T	T	F	T	T	T	F	T
F	T	F	F	T	T	F	F	F
F	F	T	T	T	T	T	F	T
F	F	F	T	T	T	T	F	F

Solution 2.4

(4)

- Premises: $p \wedge q \rightarrow \sim r$, $p \vee \sim q$, $\sim q \rightarrow p$
- Conclusion: $\sim r$
- **Not valid**

p	q	r	$\sim q$	$\sim r$	$p \wedge q$	$p \wedge q \rightarrow \sim r$	$p \vee \sim q$	$\sim q \rightarrow p$	$\sim r$
T	T	T	F	F	T	F	T	T	F
T	T	F	F	T	T	T	T	T	T
T	F	T	T	F	F	T	T	T	F
T	F	F	T	T	F	T	T	T	T
F	T	T	F	F	F	T	F	T	F
F	T	F	F	T	F	T	F	T	T
F	F	T	T	F	F	T	T	F	F
F	F	F	T	T	F	T	T	F	T

Solution 2.5

(5)

- Premises: $p \rightarrow r$, $q \rightarrow r$
- Conclusion: $(p \vee q) \rightarrow r$
- **Valid**

p	q	r	$p \vee q$	$p \rightarrow r$	$q \rightarrow r$	$p \vee q \rightarrow r$
T	T	T	T	T	T	T
T	T	F	T	F	F	F
T	F	T	T	T	T	T
T	F	F	T	F	T	F
F	T	T	T	T	T	T
F	T	F	T	T	F	F
F	F	T	F	T	T	T
F	F	F	F	T	T	T

Solution 2.6

(6)

- Premises: $p \rightarrow (q \vee r)$, $\sim q \vee \sim r$
- Conclusion: $\sim p \vee \sim r$
- **Not valid**

p	q	r	$\sim p$	$\sim q$	$\sim r$	$q \vee r$	$p \rightarrow (q \vee r)$	$\sim q \vee \sim r$	$\sim p \vee \sim r$
T	T	T	F	F	F	T	T	F	F
T	T	F	F	F	T	T	T	T	T
T	F	T	F	T	F	T	T	T	F
T	F	F	F	T	T	F	F	T	T
F	T	T	T	F	F	T	T	F	T
F	T	F	T	F	T	T	T	T	T
F	F	T	T	T	F	T	T	T	T
F	F	F	T	T	T	F	T	T	T

* Exercise 3 (score = 20)

Check if the two statement form are equivalent, and explain why:

- $(p \rightarrow q) \wedge (q \rightarrow r) \wedge (r \rightarrow p)$
- $p \wedge q \wedge r$

- Intuition: #1 = p, q, r have the same truth value, either true, or false

Solution 3

p	q	r	$\sim p$	$\sim q$	$\sim r$	$p \rightarrow q$	$q \rightarrow r$	$r \rightarrow p$	$(p \rightarrow q) \wedge (q \rightarrow r) \wedge (r \rightarrow p)$	$p \wedge q \wedge r$
T	T	T	F	F	F	T	T	T	T	T
T	T	F	F	F	T	T	F	T	F	F
T	F	T	F	T	F	F	T	T	F	F
T	F	F	F	T	T	F	T	T	F	F
F	T	T	T	F	F	T	T	F	F	F
F	T	F	T	F	T	T	F	T	F	F
F	F	T	T	T	F	T	T	F	F	F
F	F	F	T	T	T	T	T	T	T	F

↑
* Exercise 4 (points = 20)

Use inference rules to show the following argument is valid

Premises

- $p \vee q$
- $q \rightarrow r$
- $p \wedge s \rightarrow t$
- $\sim r$
- $\sim q \rightarrow u \wedge s$

Conclusion

- t

↑
* Exercise 4 (points = 20)

Use inference rules to show the following argument is valid

Premises

- $p \vee q$
- $q \rightarrow r$
- $p \wedge s \rightarrow t$
- $\sim r$
- $\sim q \rightarrow u \wedge s$

Conclusion

- t

- From premises $\sim r$ and $q \rightarrow r$, we have $\sim q$ using Modus Tollens
- From $\sim q$ and premise $\sim q \rightarrow u \wedge s$, we have u and s following Modus Pollens and Conjunction
- From $\sim q$ and premise $p \vee q$, we have p following Elimination
- From p , s , and $p \wedge s \rightarrow t$, we have t following conjunction and Modus Pollens

Proof techniques review

- To finish by 4h25

Define numbers precisely

- A number n is odd if ____
- A number r is rational if ____
- A number r is irrational if ____
- A number p is prime if ____
- A number p is composite if ____

expand-factorize

- Expand $(x+1)^2$
- Expand $(x-1)^2$
- Expand $(x+y)^2$
- Expand $(x+a)(x+b)$
- Factorize x^2+2x+1
- Factorize x^2+3x+2
- Factorize x^2+4x+3
- Solve this equation of real numbers: $x^2 - 2x + 1 = 0$
- Solve this equation of real numbers: $x^2 - 3x + 2 = 0$

True or false: odd, even, prime, composite

- if a and b are integers, is $10a^2 + 64b + 7$ is odd
- if a and b are integers, is $a^2 + 64b + 7$ is even
- Write the first five prime numbers

True or false

- If a is odd and b is even, then, $2a+3b$ is even.
- For any nonnegative real numbers x , we have $x^2 > x$.
- For all integers m and n , if $mn = 1$ then $m = n = 1$.
- For all integers m and n , if $m + n$ is even then m and n are both even.
- There exists an integer n such that $6n^2 + 27$ is prime
- There exists an integer $m \geq 3$ such that $m^2 - 1$ is prime
- composite + composite = composite

Two proof exercises (if time allows)

- 1. How to write a proof**
- 2. Different ways to address a proof**

Solution: How to write a proof:

Prove rational + rational = rational

- Check whether the proposition is correct with intuition and examples.
- Begin a proof with “Proof.”
- State the proposition formally.
- Which type is the proposition — existential, universal?
- Which type of proof will you write? In particular, If existential, find an example; if universal, first fixing an arbitrary element in the domain set. Write “Suppose/Let...” to get started.
- Write the proof like an argument in an English essay; convince with rigor.
- End a proof with “QED.”

How to write a proof:

Prove rational + rational = rational

- Proof.
 - We want to prove: for any rational numbers x and y , $x+y$ is a rational number.
 - Suppose x and y are rational numbers. Then x can be written as a/b , and y can be written as c/d , and $x+y=(ad+bc)/bd$
 - Therefore $x+y$ is a rational number
- QED

Problem 6. [5 points]

Prove that if $n^2 + 8n + 20$ is odd, then n is odd for natural numbers n .

SBU 2021 Final

Solution method 1

Problem 6. [5 points]

Prove that if $n^2 + 8n + 20$ is odd, then n is odd for natural numbers n .

- Proof.
 - Proof by contraposition.
 - Instead of proving $n^2 + 8n + 20$ is odd $\Rightarrow n$ is even. We prove
 - (G) n is even $\Rightarrow n^2 + 8n + 20$ is odd
 - That is,
 - for any natural number n , if n is even, then $n^2 + 8n + 20$ is even
 - Suppose n is a natural number and n is even, we can immediately show $n^2 + 8n + 20$ is even since it is a sum of three even numbers. Thus, (G) is proved.
- QED

Solution method 2

Problem 6. [5 points]

Prove that if $n^2 + 8n + 20$ is odd, then n is odd for natural numbers n .

- Proof.
 - We want to prove
 - (G) for any natural number n , if $n^2 + 8n + 20$ is odd, then n is odd
 - Proof by contradiction. Namely, We negate (G) above, obtaining
 - (\sim G) there exists a natural number n , such that $n^2 + 8n + 20$ is odd, and n is even.
 - The above (\sim G) is a contradiction since for any natural number n , $n^2 + 8n + 20$ even whenever n is even. In other words, (\sim G) is false. Thus (G) is proved.
- QED

Solution method 3

Problem 6. [5 points]

Prove that if $n^2 + 8n + 20$ is odd, then n is odd for natural numbers n .

- Proof.
 - We want to prove
 - for any natural number n , if $n^2 + 8n + 20$ is odd, then n is odd
 - Suppose n is a natural number and $n^2 + 8n + 20$ is odd. We need to prove
 - (G) n is odd
 - Proof by contradiction. Suppose n is even. Then $n^2 + 8n + 20$ must be even, which contradicts with the assumption that $n^2 + 8n + 20$ is odd. In other words, $(\sim G) \rightarrow \text{False}$. Thus (G) must be true.
- QED

That is all for today

- Homework 02
- Exercises on numbers
- Exercises on proof

Thank you for your attention!
